(54) POLARIZING PLATE AND LIQUID CRYSTAL DISPLAY DEVICE WHICH USES THE SAME

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a reflection type polarizing plate having a thin polarizing layer, a thin reflecting layer and no parallax and to provide a thin reflection type or semi-transmission and reflection type liquid crystal display device having no parallax by using the above plate.

SOLUTION: The polarizing plate has a polarizing layer 5 of 20 to 1,500 nm thickness on the surface of a layer 3 having reflective characteristics. The thin polarizing layer 5 can be made from a planar dye. Further, a light diffusing layer 7 can be formed in the side of the polarizing layer 5 of the polarizing plate. The reflection type or semi-transmission reflection type liquid crystal display device can be obtained by stacking the polarizing plate on a liquid crystal cell 9 with the polarizing layer 5 side in contact with the cell.
